

SCIENCE-BASED TARGETS FOR CITIES

Webinar for Southeast Asian Cities

14 March 2022 at 15:00-17:00 PM Philippine Standard Time

The Intergovernmental Panel on Climate Change (IPCC) released a report on the Physical Science Basis of Climate Change wherein they underscored that “Global surface temperature will continue to increase until at least the mid-century under all emissions scenarios considered.” This reality will rapidly become evident unless deep reductions in GHG emissions are enforced immediately. The report said that with an additional increment in global warming, weather and climate extremes such as increased frequency and intensity of hot extremes, heavy precipitation, agricultural and ecological droughts, and intense tropical cyclones, will continue to worsen. Therefore, the global community has called on state and non-state actors including local governments to mobilize stakeholders in a concerted effort in combating climate change.

This webinar invites local governments in Southeast Asia in a webinar that will introduce a platform to rally and share climate actions at the local level as well as to build capacities in setting science-based targets that back up their climate commitments.

Time	Activity	Responsible Party
15:00 – 15:05	Introduction to the webinar	ICLEI SEAS
15:05 – 15:15	Overview of the Cities Race to Zero	ICLEI WS
15:15 – 16:45	Science-Based Targets for Cities • Introduction • Methodological approaches	ICLEI WS
16:45 – 16:55	How can ICLEI support SEA cities?	ICLEI SEAS
16:55 – 17:00	Wrap up and next steps	ICLEI SEAS
